ABSTRACT

In an electrophoretic display apparatus, a surface of charged particle, the dispersion medium, and a surface of an inner wall on which charged 5 particles are to be deposited satisfy any one of the following (A) to (D): (A) the charged particle surface is hydrophilic, the dispersion medium is hydrophobic or is hydrophobic and lipophobic, and the inner wall 10 surface is hydrophilic; (B) the charged particle surfaceis hydrophobic, the dispersion medium is hydrophilic or is hydrophobic and lipophobic, and the inner wall surface ishydrophobic; (C) the charged particle surface ishydrophobic and lipophobic, the dispersion medium is hydrophobic or hydrophilic, and 15 the inner wall surface is hydrophobic, with the proviso that when the dispersion medium is hydrophobic, a difference in hydrophobicity between the dispersion medium and the charged particle surface is larger than a difference in hydrophobicity between the inner wall 20 surface and the charged particle surface; and (D) the charged particle surface ishydrophobic and lipophobic, the dispersion medium ishydrophobic or hydrophilic, and the inner wall surface ishydrophobic and 25 lipophobic.
